**Step 6: On the upper right corner click "Connect Wallet"**

Step 7: Make sure to connect "Phantom Wallet" or the wallet you used to store Solana
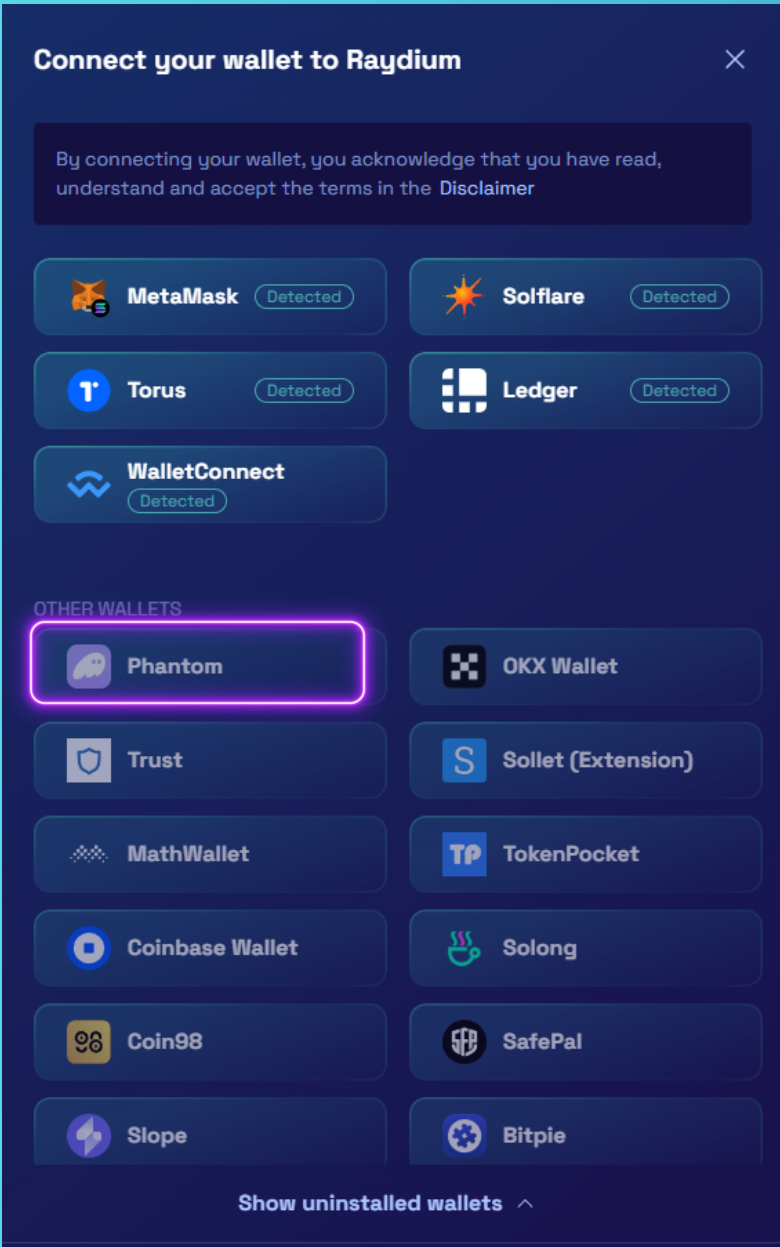

Step 7: After connecting simply click this symbol on the raydium farm "+".

Step 8: Click Add liquidity. A swap will appear.

Step 9: Put the total amount of $KORRA tokens you want to add on LP pool.

"THIS IS A 1:1 RATIO, the value of the total amount of $KORRA tokens you'll add will also be the corresponding value of $SOLANA tokens you'll ADD".

NOTE: When adding LP this doesn't mean you'll burn your $KORRA AND $SOLANA. It's simply just adding on the pool and you can TAKE IT ANYTIME, the same amount of $KORRA and the same amount of $SOLANA.

100,000 $KORRA tokens valued at $2,095.07 means you'll need to add 21.22 SOL to be able to add on farming.
